

UDAT MEETING NOTES

Project: 901 16th Street

Planner: Wade Wietgreffe

Date: September 25, 2012

Attendees: Alexis Smith, David Winslow, Neil Hrushowy, Diego Sanchez

UDAT review of this project entailed the streetscape proposal only. See PPA letter for the previous project design comments.

Passenger drop-off

The site plan indicates an on-site passenger drop off zone and another on the 16th street side. Given the future TEP and potential conflicts with BRT and the loss of public realm enhancement, UDAT does not recommend 180' curb cut on 16th street for passenger loading. UDAT suggests the project sponsor explore other options on-site.

The street crossing from the site to Daggett place is only approximately 100' from the existing Missouri street crosswalk and would be another point of conflict between the future transit improvements and pedestrians. The existing crosswalk provides adequate connection. Another crosswalk would be redundant.
